

A new alternative to HEARING AIDS

The **BAHA (Bone Anchored Hearing Aid) system** is a relatively new hearing system which is surgically implanted and allows sound to be conducted through the bone. It is worn under the hair and is small in comparison to existing hearing devices, making the BAHA both comfortable and aesthetically pleasing to patients.

To learn more about the Bone Anchored Hearing Aid, call ENTA Allergy, Head & Neck Institute at **217-876-3682** or visit us at 101 W. McKinley • Decatur Illinois.

ENTA Specialists

The ENTA specialists offer Central Illinois a comprehensive solution for the medical and surgical management and treatment of patients with allergies and diseases and disorders of the ear, nose throat and related structures of the head and neck.
